Equitable Feedback - Quality & Quantity

Quality feedback provides information and possible actions.

Quality feedback serves three purposes

1. Value Student Perspective

- ☐ Value the effort that students brought to task

2. Deepen Content Knowledge

- ☐ Ensure responses are accurate and students feel challenged

3. Push Thinking

- ☐ Prompt students to reflect on learning, use metacognition, and transfer skills

Equitable Feedback - Quantity

What quantity of feedback ensures equity?

Frequencies and Duration

- ❑ The amount of time teachers spend interacting with individual students should be proportional to the amount of growth a student needs to move beyond mastering the learning goal.

Purposes

- ❑ All students should receive high information feedback serving all three purposes.

Feedback GROWS Student Understanding

100-level
Low information

- Low impact on student learning
- Low transfer to other tasks
- Low information about their thinking

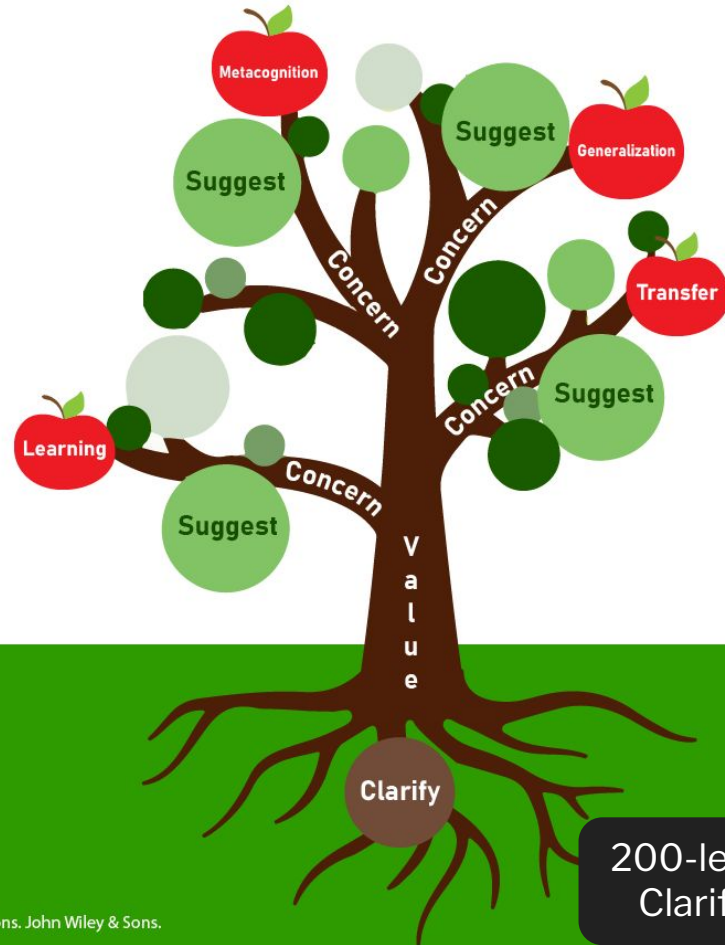

Feedback GROWS Student Understanding

100-level
Low information

- Low impact on student learning
- Low transfer to other tasks
- Low information about their thinking

200-level
Clarify

Clarifying Student Perspective

What made you say ____?

What's the most important word in this question?

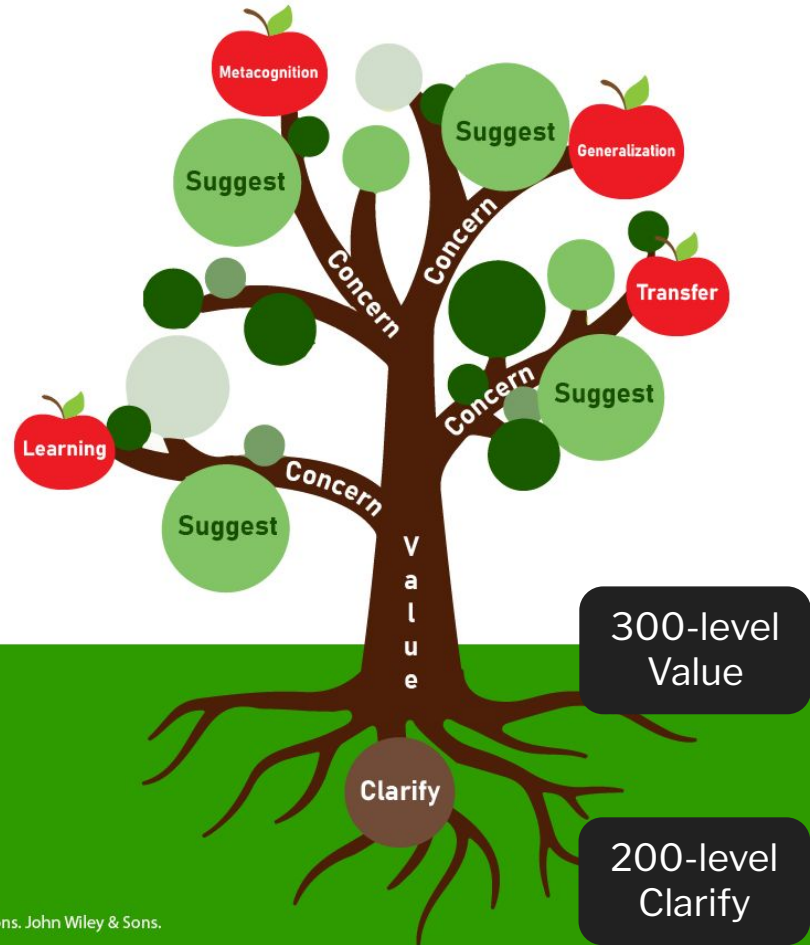

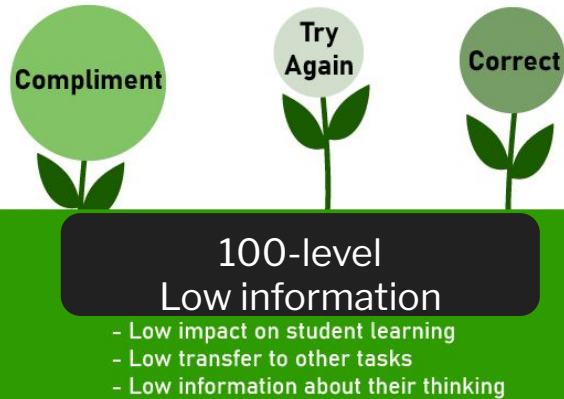

What should I notice in your work?

What are you working on in this response?

Show me in your work where you included ____.

Feedback GROWS Student Understanding

Sharing Value Statements

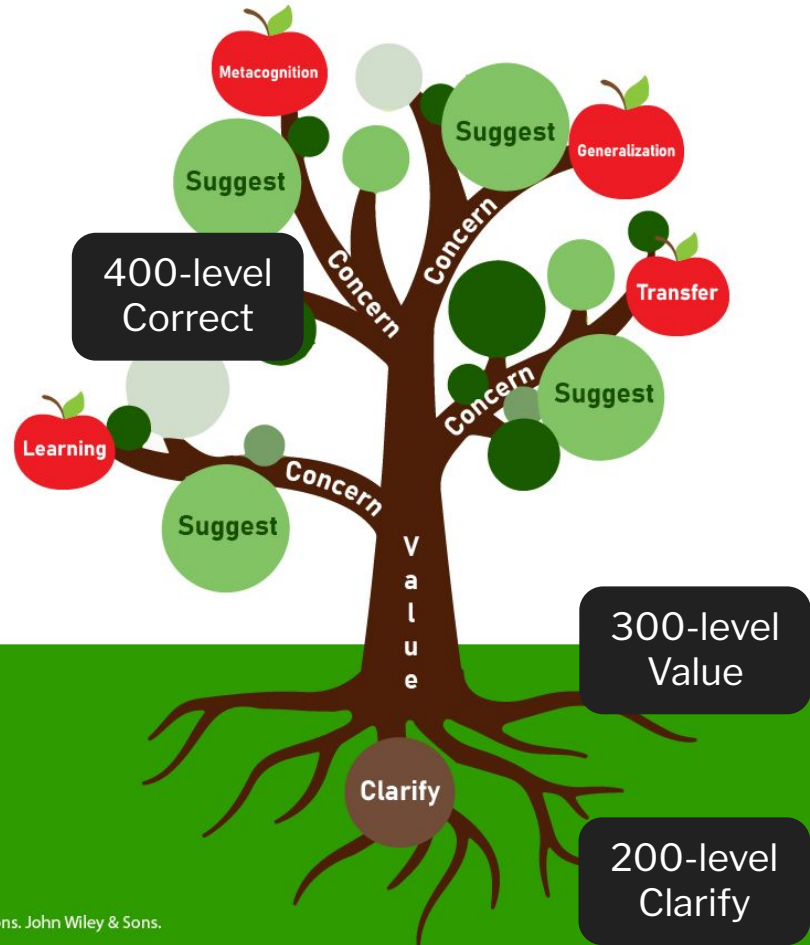

★
I see how you explained
your idea using
knowledge from your
own experiences.

You provided
information, I heard a
specific name for the
machine in your
response. ★

Jasmine used information
from the text in her
answer. ★

Feedback GROWS Student Understanding

Offering Concerns & Suggestions

Concerns are always paired with suggestions

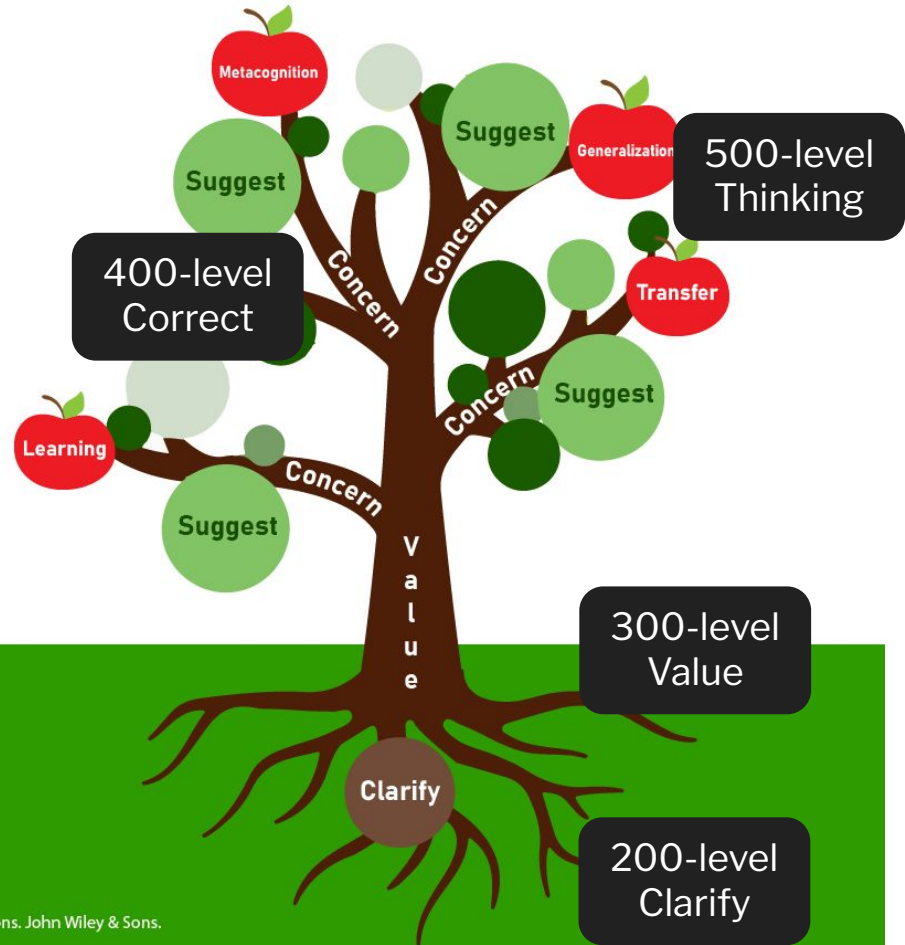

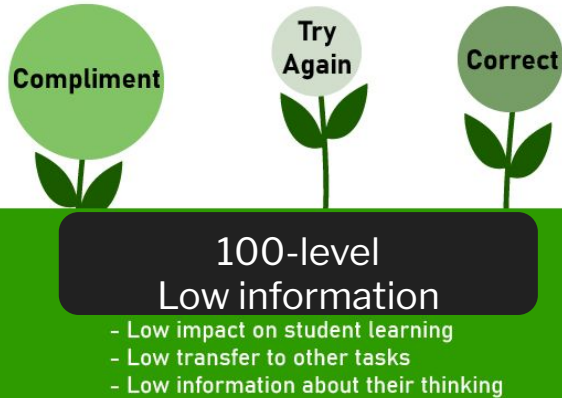

I am concerned that _____

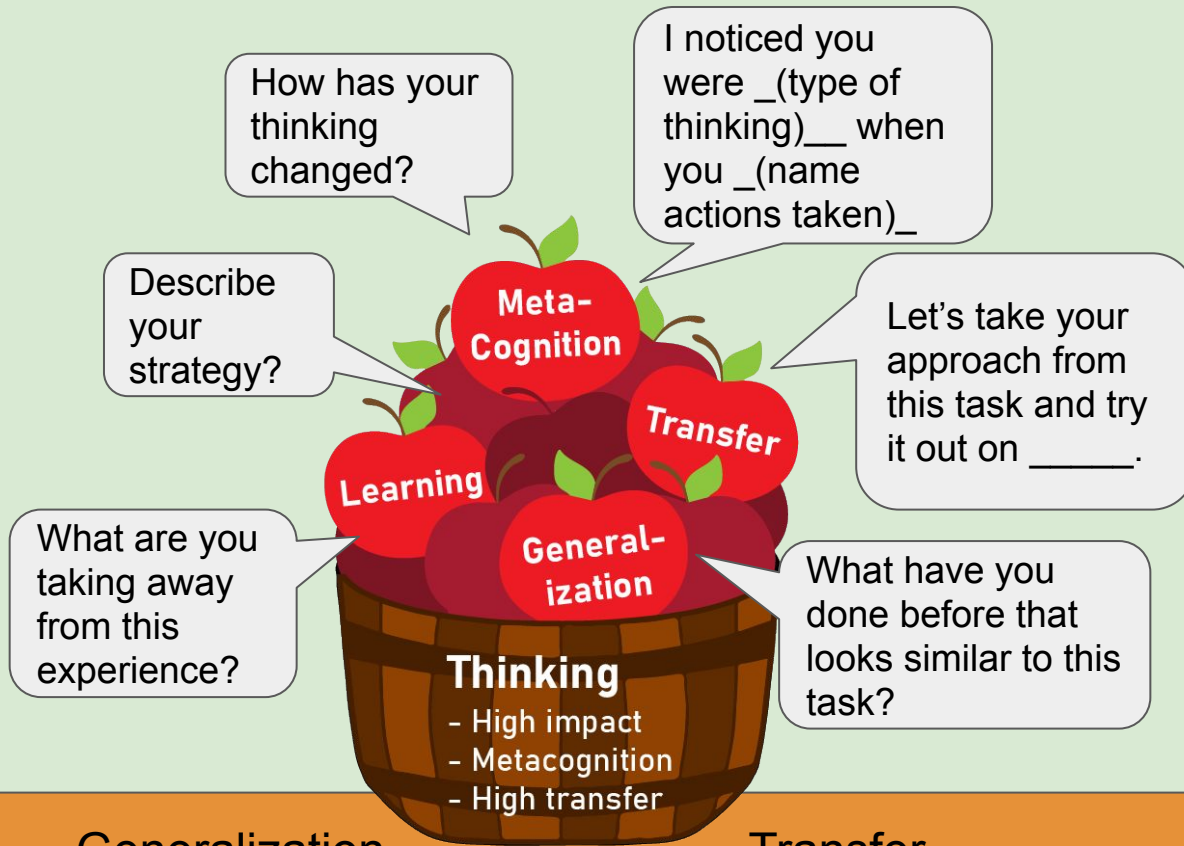

So I suggest _____ or _____.

Suggestions are never hidden in questions

Feedback GROWS Student Understanding

Feedback
focused on
thinking leads to
learning beyond
the task.

Generalization

Using past learning to
engage in current situation

Transfer

Apply learning to over time to
different contexts, with different
materials and/or purposes.

Metacognition

Awareness of one's own thought
processes to plan, monitor, adjust, and
reflect on learning actions,
outcomes, and experiences.

Feedback across time

500 Thinking

400-Correct

300-Value

200-Clarify

100- low
information

Provide Equitable Feedback

Equitable feedback for ALL students

Recognizes Student Perspective

- ❑ The effort that students brought to task is recognized and valued

Deepens Content Knowledge

- ❑ Responses are accurate and students are challenged

Pushes Thinking

- ❑ Students are prompted to reflect on their learning, metacognition or strategies, and transfer

0 00:15 00:42 01:07 01:21 01:58 02:06 02:29 04:00 04:06 04:21 04:44 05:20 05:46 06:16 07:04

Time

Spending time clarifying and valuing student perspectives

Total 100	Total 200	Total 300	Total 400	Total 500	Total X	Mean	Std
10	12	1	0	0	23	161	-0.5

Each student receiving task specific feedback (flowers) and then corrections (branches)

Total 100	Total 200	Total 300	Total 400	Total 500	Total X	Mean	Std
10	7	1	7	0	25	220	1.1

Draw your feedback trajectory

Time

Student Initial & Revised Responses

“What equipment did scientists use to discover water on the moon?”

Initial

You'd need a scientific tool called a microscope to look really closely.

Revised

Scientists used the Lunar Orbiter to discover tiny bits of frozen water in craters on the moon.

Let's practice prompting Savannah to think about her thinking

1. I started out thinking _____
2. and now I think _____
3. because _____
4. So next time, I see a question asking about a text, I will _____

Student Initial & Revised Responses

“What equipment did scientists use to discover water on the moon?”

Initial

Scientists use a lot of equipment, like oxygen tanks.

Revised

Scientists found ice using small machine.

Let's practice prompting Savannah to think about her thinking

1. I started out thinking _____
2. and now I think _____
3. because _____
4. So next time, I see a question asking about a text, I will _____

Give a different color post it note/paper or if online - highlighted text to distinguish the type of feedback
